Discussion
Assessment
Response

RADAR (**R**esponsibility, **A**nticipation, **D**iscussion, **A**ssessment and **R**esponse) is an approach to managing pain that is adopted at:

to ensure you receive the best possible pain management following surgery.

To help us maintain our high levels of pain care and to improve our services, please complete the short patient satisfaction survey below.

	Poor	Reasonable	Good	Excellent
How effective has your pain relief been since your operation?				
With regards to managing your pain, how would you rate the communication from the healthcare team?				
	Yes		No	
Did you receive information prior to your operation about how your pain would be controlled?				
If yes, did you find this information helpful?				
Did you feel involved in the assessment of your pain?				
Do you feel that every effort was made to relieve your pain?				
Overall, were you satisfied with the inpatient management of your pain at this hospital?				
Please comment about any aspect of care you were particularly pleased with.				
Please comment if you think that improvements could be made in the management of pain at this hospital.				

Once you have completed this survey, please return this form to a member of staff on discharge.

Don't suffer in silence
 put pain on our
RADAR
